WAVE strategy

setup

The following setup is made with a Generator and started with \$300.
If you are not trading USDT but \$300 worth of coin, then we obviously start with a sell. We select our preferred pair.
In our example it will be **ETH/USDT**.

The screenshot shows the 'Trade settings' interface for a 'Buy' order. On the left is a sidebar with a menu: 'Basic settings' (checked), '2 Trade settings' (selected), '3 Sell settings', '4 Run settings', '5 Safety settings', and '6 Overview'. The main panel is titled 'Trade settings' and has a 'Buy' button at the top. It contains several input fields: 'Opening exchange rate' (1400), 'Max. exchange rate' (1750), 'Expected amount of generated SPOT BOTs' (12 pcs), 'Percentage step' (2%), 'Base amount' (0.03 ETH), 'Prepurchase (opening) exchange rate step limit' (0.5%), and 'Step limit' (0.5%). There are also toggle switches for 'Percentage step', 'Base amount', and 'Prepurchase (opening) exchange rate step limit'. A 'Next' button is at the bottom right.

The screenshot shows the 'Sell settings' interface. At the top is a TradingView chart for 'Ethereum / TetherUS - BINANCE' with a candlestick chart and an RSI indicator. Below the chart is the 'Sell settings' form. It has a 'New sell' button and a 'New Take Profit level' button. The 'Profit type' is set to 'Percentage'. The 'Profit' is set to 2% and 3% for two different sell orders. The 'Amount' is set to 0.015 ETH for both. The 'Quantity to use' is 0.03 ETH. There are 'Back' and 'Next' buttons at the bottom.

We generate steps to **2%** which is ideal for this amount of capital.

We set the start and max rate to generate **approximately 12 – 15 levels**.

The quantity is set to be \$40. (In our example 0,03ETH ~ \$40)

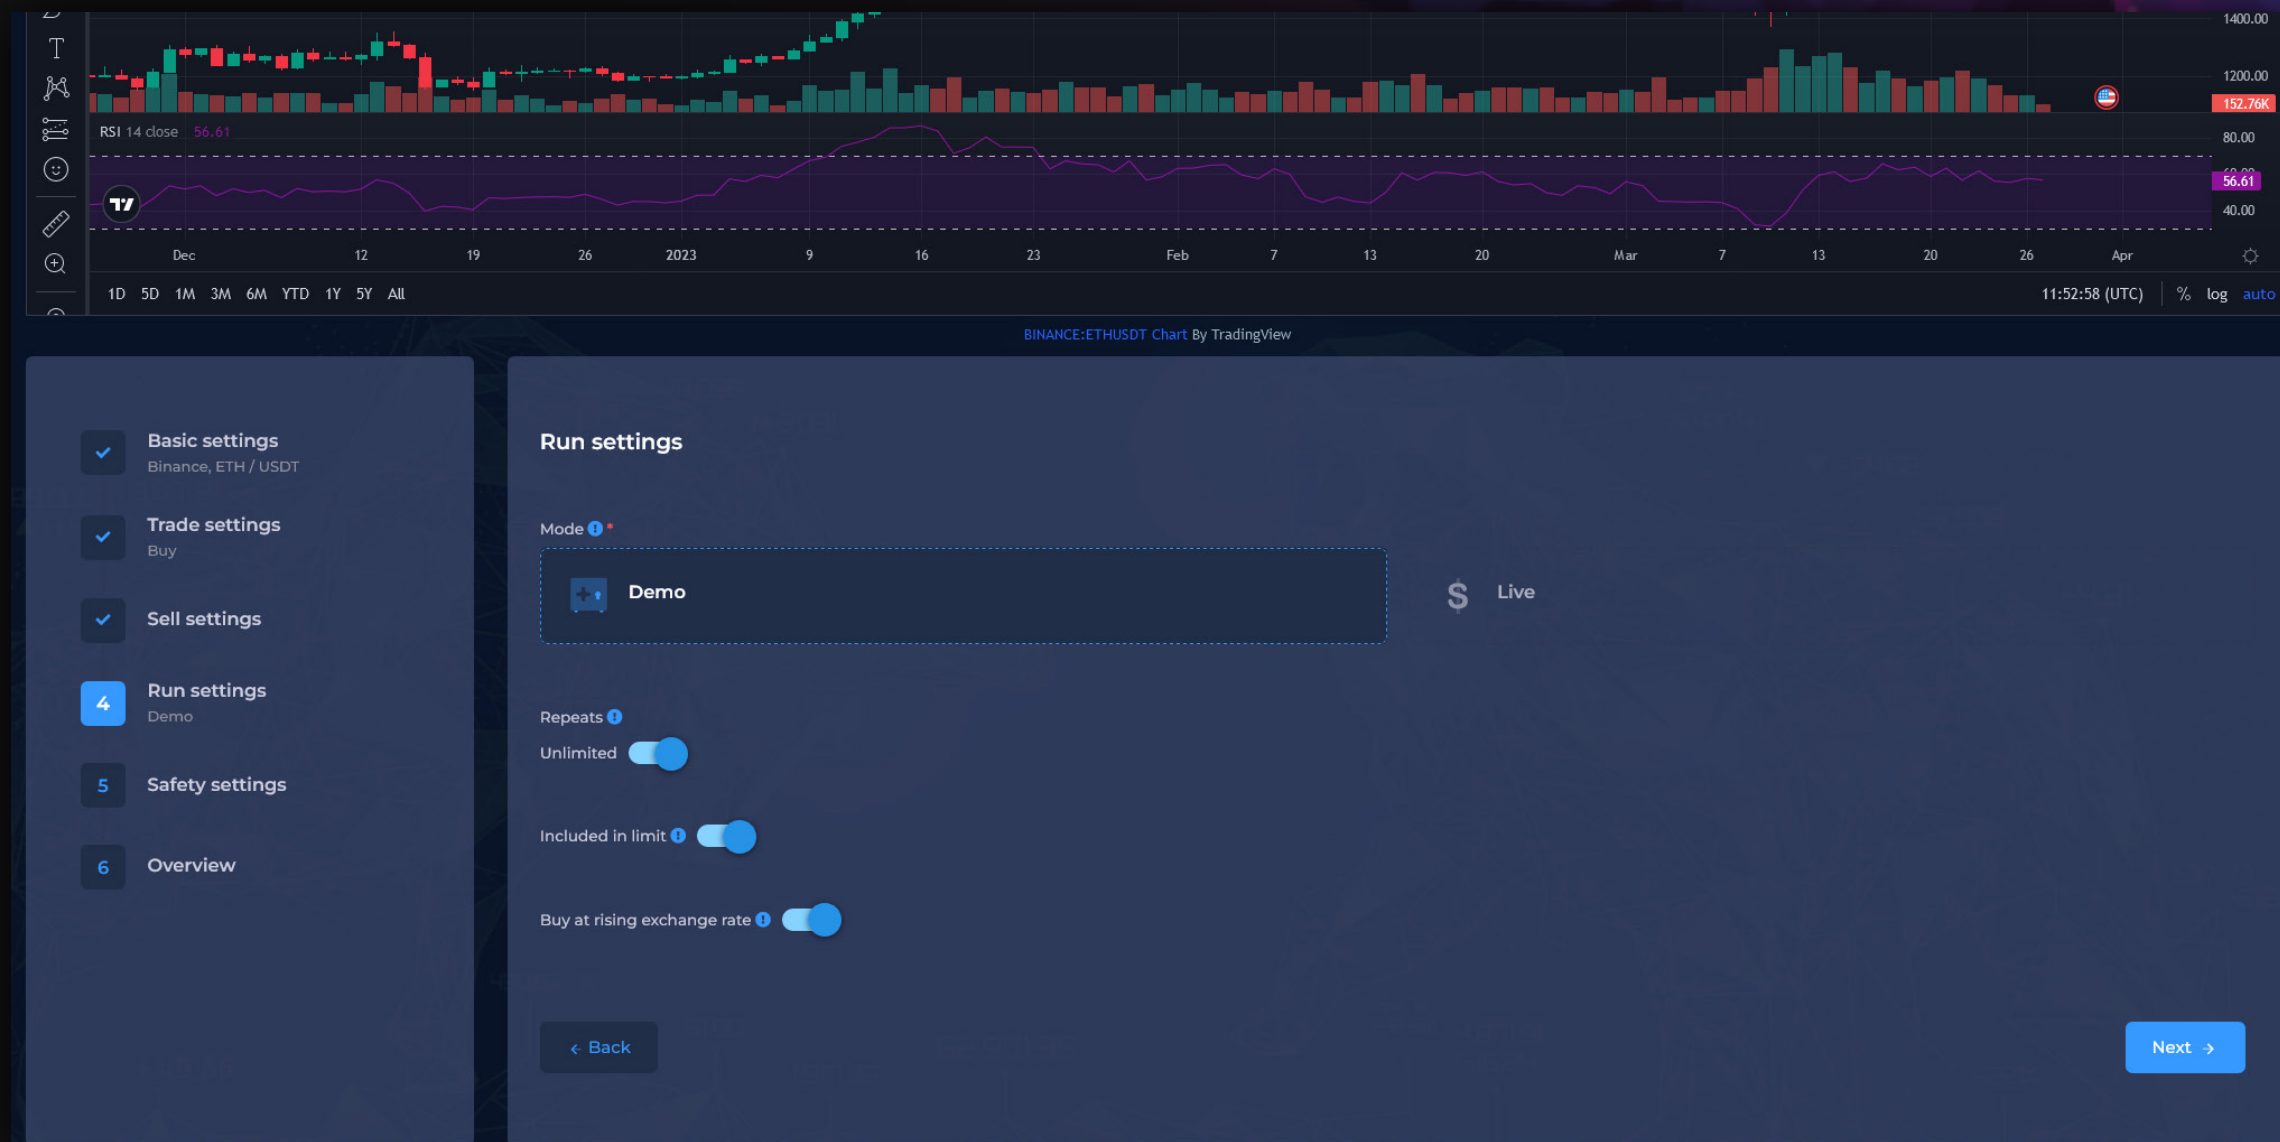

Leave the preemption level at 0.5 percent.

Use the **New Sell** button to split the coin into two parts (in our example \$40)

Set the buyback or sell part to **2 and 3 percent**.

WAVE strategy

setup

If you just want to try it out, leave it in demo mode but if you want to put it to work right away, set it up for live trading.
Set the number of runs to infinite.

The screenshot displays the 'Safety settings' tab of the WAVE strategy setup interface. The sidebar on the left shows the navigation menu with 'Safety settings' selected. The main panel contains the following settings: 'Limit' set to 'USD', 'Trailing up' and 'Trailing down' both set to 'On', 'Stop Loss' set to 'Status', 'Fix Stop Loss' set to 'Off', 'Percentage Stop Loss' set to 'On', 'Stop Loss exchange rate' set to '10%', and 'Stop Loss limit' set to 'USD'. There are also toggle switches for 'Protection against stuck' (Off), 'Lower limit (Off)', and 'Upper limit (Off)'. 'Back' and 'Save' buttons are located at the bottom of the panel.

Let's turn on the exchange rate **appreciation** and **depreciation** tracking.
Set the Stop Loss to 10% for \$300 capital.
As a last step, save the trade.
